

Name_____

- 1) True or false? The expressions `i++` and `++i` can be used interchangeably with no side effects.
- A) true
 - B) false

Consider the following program:

```
//StringVsId.java - contrast strings and identifiers
class StringVsId {
    public static void main(String[] args) {
        String hello = "Hello, world!";
        String stringVary;
        stringVary = hello;
        System.out.println(stringVary);
        stringVary = "hello";
        System.out.println(stringVary);
    }
}
```

- 2) What is the output of the above program?
- A) hello
"hello"
 - B) "Hello World!"
hello
 - C) Hello World!
Hello World!
 - D) "Hello World!"
"hello"
 - E) Hello World!
hello

Consider the following fragment of code:

```
temperature = 45;
if (temperature < 32)
    System.out.print("It is now");
    System.out.print(32 - temperature);
    System.out.println(" below freezing.");
System.out.println("It's " + temperature + "degrees");
```

- 3) If the above fragment of code is executed what will be printed?
- A) It is now -13 below freezing
 - B) -13 below freezing
It's 45 degrees
 - C) It's 45 degrees

Consider the following program:

```
class Min2 {  
    public static void main(String[] args) {  
        int j = 78, k = 3 * 30, m;  
        System.out.println("Minimum of two integers Test:");  
        m = min();  
        System.out.println("The minimum of : " + j + " , " + k + " is " + m);  
    }  
  
    static int min() {  
        if (j < k)  
            return j;  
        else  
            return k;  
    }  
}
```

- 4) The results of the above program are:
- A) The minimum of : j, k is 78
 - B) The minimum of : j, k is j
 - C) The minimum of : j, k is 90
 - D) None of above. It will not compile

Consider the following fragment of code

```
boolean x = false;  
if (x = true) {  
    System.out.print("not ");  
}  
System.out.print("quite");
```

- 5) What does this code do?
- A) print "not quite"
 - B) print "quite"
 - C) print "not"
 - D) infinite loop
- 6) True or false? The lexical elements of a Java program are keywords, identifiers, literals, operator symbols, punctuation, comments, and white space.
- A) true
 - B) false because white space is not a lexical element

Consider the following schema:

```
if (Expression1)  
    if (Expression2)  
        Statement1  
else  
    Statement2
```

- 7) In the above schema:
- A) Statement2 is executed whenever Expression1 is false.
 - B) Statement2 is executed only when Expression1 is true and Expression2 is false.

Consider the following fragment of code:

```
printf("%s", "abc");  
printf("%c%c%c%c", 'a', 'b', 'c');
```

8) The above two statements produce the same output.

- A) true
- B) false

9) The execution time of Bubble Sort of n items is proportional to

- A) $\log n$
- B) n
- C) n^2
- D) 2^n

Remember the range of values for bytes is -128 to 127

Consider the following fragment of code:

```
int i = 127, j = 128;  
byte iAsByte = (byte)i, jAsByte = (byte)j;  
System.out.println(iAsByte);  
System.out.println(jAsByte);
```

10) The output of the above code is

- A) 127
-128
- B) 127
128

Consider the following fragment of code:

```
int i = 3, j = 4;  
boolean flag;  
flag = 5 < 6;  
flag = (i == j);  
flag = (j + 2) <= 6;
```

11) In the above fragment of code the variable flag takes on the following sequence of values in order.

- A) true, true, true
- B) false, true, false
- C) true, false, undefined
- D) true, false, true
- E) true, true, false

Consider the following fragment of code:

```
dayOfWeek = 4;
switch (dayOfWeek) {
    case 1:
        System.out.println("Sunday");
        break;
    case 2:
        System.out.println("Monday");
        break;
    case 3:
        System.out.println("Tuesday");
        break;
    case 4:
        System.out.println("Wednesday");
    case 5:
        System.out.println("Thursday");
        break;
    case 6:
        System.out.println("Friday");
        break;
    case 7:
        System.out.println("Saturday");
        break;
    default:
        System.out.println("Not a day number " + dayOfWeek);
}
```

12) The above fragment of code when executed prints

- A) Wednesday
Thursday
- B) Wednesday
- C) Monday
Tuesday

13) What is the value of the Java expression "10"+"20" ?

- A) "1020"
- B) 30
- C) 10 + 20

14) True or false? Keywords can also be used as variables, but then the special meaning of the keyword is overridden.

- A) true
- B) false

15) The number of bits used to represent values of type int is:

- A) 128
- B) 16
- C) 32
- D) 64

16) 16 bits are used to represent the values of both char and short types.

- A) True
- B) False

Consider the following fragment of code:

```
int j = 0x10;
```

```
int k = 16;
```

```
boolean b = j != k;
```

17) If the above three lines of code were executed then b would be equal to

A) 0x10

B) 16

C) false

D) 1016

E) true

18) A sequence of instructions on a computer is always an algorithm.

A) True

B) False

19) The time for a Binary Search over n items is proportional to log n regardless of whether the items are sorted or not.

A) True

B) False

Consider the following statement:

```
a = (b = 2) + (c = 3);
```

20) The above statement yields

A) The same results as execution of

```
b = 2;
```

```
c = 3;
```

```
a = b + c;
```

B) nothing it is illegal

Consider the following code fragment:

```
int count = 21;
```

```
System.out.println("The multiples of 21 between 1 and 100 are:");
```

```
while (count != 100){
```

```
    System.out.print(count + " ");
```

```
    count = count + 21;
```

```
}
```

```
System.out.println("done");
```

21) The above code fragment will print

A) 21 42 63 84 done

B) 21 42 63 84 105 done

C) neither of above answers

Consider the following:

`System.out.print(x)` //print the value of x
`System.out.println(x)` //print the value of x followed by a newline
`scan.nextInt()` //get an int from the keyboard
`Math.min(x,y)` //find the smaller of x and y
`Math.sqrt(x)` //find the square root of x
`w1.concat(w2)` //concatenate the strings w1 and w2
`word.length()` //find the length of the string word

22) All of the these are:

- A) Input statements
- B) Output statements
- C) classes
- D) Predefined methods
- E) in java.util

Consider the following fragment of code:

```
int n = 1234;  
System.out.println("1234");  
System.out.println(n);
```

23) The print statements in the code above produce the same output.

- A) true
- B) false

The following two questions use the following information:

Jane has written a program to print every line of a text file. Her program is called `PrintList` and it takes the name of a text file as a command line argument. She wants to test it on the file `mySongs.txt`. She has the files `PrintList.java` and `mySongs.txt` in the same folder.

24) What command will Jane type to compile her code?

- A) `javac PrintList.java mySongs.txt`
- B) `javac PrintList.java`
- C) `java PrintList`
- D) `javac PrintList.class`
- E) `java PrintList mySongs.txt`

25) After the code is compiled, what command will Jane type to run the program?

- A) `java PrintList mySongs.txt`
- B) `java PrintList > mySongs.txt`
- C) `java PrintList.class`
- D) `javac PrintList mySongs.txt`
- E) `java PrintList.class > mySongs.txt`

Consider the following fragment of code:

```
x = 3;  
y = 4;  
if (x < y);  
System.out.println("The smaller is " + x);  
if (y < x);  
System.out.println("The smaller is " + y);
```

26) What is printed when the above fragment of code is executed?

- A) The smaller is 3
The smaller is 4
- B) nothing
- C) The smaller is 3
- D) The smaller is 4

Consider the following fragment of code:

```
System.out.println("type two integers for  
the width and height of a box");
```

27) The above lines of code output

- A) type two integers for
the width and height of a box
- B) type two integers for the width and height of a box
- C) nothing since they are not legal

Consider the following fragment of code for the next two questions:

```
String s = "ok";  
for (int i = 1; i <= s.length(); i++) {  
    System.out.print(s.charAt(i));  
}
```

28) When int i is 1, what is the value of s.charAt(i)?

- A) 1
- B) 'k'
- C) 'o'
- D) 0

29) True or false? This code will cause an exception.

- A) true
- B) false

30) The range of values for a char type is 0 to 65536

- A) True
- B) False

The following code fragment is meant to sum up all the numbers in numArray, but there are two important pieces missing.

```
int[] numArray = { 3, 6, 42, 3 }
int arraySum = 0;
for (int i = 0; <A> ; i++) {
    arraySum = arraySum + numArray[ <B> ];
}
System.out.println(arraySum);
```

31) What should be inserted in place of <A> and to complete the code?

- | <A> | |
|---------------------------|----------|
| A) i < numArray.length() | i |
| B) i < numArray.lenght() | arraySum |
| C) i <= numArray.length() | arraySum |
| D) i <= numArray.length() | 3 |
| E) i == numArray.length() | i++ |

Consider the following code fragment:

```
int squareRoot = 1;
for (int i = 1; i <= 16; i++) {
    squareRoot = Math.sqrt(i);
}
System.out.println("i = " + i);
```

32) This code fragment will print

- A) i = 4
- B) i = 16
- C) neither of the above answers

33) The number of bits used to represent values of type long is:

- A) 32
- B) 64
- C) 16
- D) 128

Consider the following fragment of code:

```
String s = "ok";
s.charAt(1) = 'b';
```

34) What is the result of the code?

- A) the code won't compile
- B) s = "bk"
- C) s = "ok"
- D) s = "ob"

35) Informal but relatively precise descriptions of algorithms are called pseudocode.

- A) True
- B) False

Consider the following fragment of code:

```
char c = 'a';
```

```
System.out.printf("%c",c); // a is printed
```

```
System.out.printf("%d",c); // 97 is printed
```

36) Is the above fragment of code legal?

A) Yes

B) No

37) The range of values for a short type is 0 to 65536

A) True

B) False

Consider the following fragment of code:

```
int x = 3/4;
```

```
int y = (int) (3.0f/4);
```

```
boolean b = x==y;
```

38) Execution of the above fragment of code will result in b being equal to

A) true

B) 3/4

C) false

D) 3.75

Consider the following two fragments of code:

```
//code fragment A
```

```
if (ageOfPerson < 18)
```

```
System.out.println("child fare");
```

```
else {
```

```
if (ageOfPerson < 65)
```

```
System.out.println("adult fare");
```

```
else
```

```
System.out.println("senior fare");
```

```
}
```

```
//code fragment B
```

```
if (ageOfPerson < 18)
```

```
System.out.println("child fare");
```

```
else if (ageOfPerson < 65)
```

```
System.out.println("adult fare");
```

```
else
```

```
System.out.println("senior fare");
```

39) True or false? the above two fragments of code, A and B, are equivalent.

A) true

B) false

Consider the following program:

// MakeChange.java - change in dimes and pennies

import java.util.*;

```
class MakeChange {  
    public static void main (String[] args) {  
        int price, change, dimes, pennies;  
        Scanner scan = new Scanner(System.in);  
        System.out.println("type price (0 to 100):");  
        price = scan.nextInt();  
        change = 100 - price; //how much change  
        dimes = change / 10; //number of dimes  
        pennies = change % 10; //number of pennies  
        System.out.print("The change is : ");  
        System.out.println(dimes + " dimes " + pennies + " pennies");  
    }  
}
```

40) List all the classes that are used or defined in the above program?

- A) price, change, dimes, pennies
- B) MakeChange, String, Scanner
- C) MakeChange, String, Scanner, System
- D) MakeChange
- E) MakeChange, Scanner

41) The expressions, $(m == 0 \mid \mid n/m > 0)$ and $(n/m > 0 \mid \mid m == 0)$, have the same value regardless of the value of m.

- A) true
- B) false

Consider the following circumstance.

Ebenezer has written a simple Hello World program in java, but it is not compiling.

```
1 import java.util.*  
2 class hello {  
3     public static      void main(String[] args) {  
4         System.out.println( Hello World! );  
5     }
```

Ebenezer has a few ideas where the errors might be:

- I. Line 1: he forgot the semicolon ; at the end of the line.
- II. Line 2: hello should be capitalized.
- III. Line 3: there are too many spaces between the words static and void.
- IV. Line 4: he needs to put quotes around "Hello World!"
- V. He needs an extra closing brace } at the end of his program.

42) Which of the above are the actual errors

- A) I, II, III, V
- B) I, II
- C) II, III, V
- D) I, IV, V
- E) I, III, IV

Consider the following fragment of code:

```
System.out.print("Hello, world!\n");
System.out.println("Hello, world!");
```

43) The above two lines of code will output

- A) Hello world!\n
Hello world!
- B) "Hello world!\n"
"Hello world!"
- C) Hello world!\nHello world!
- D) Hello world!
Hello world!

The next two questions are based on the following code:

```
/* This program prints a greeting message */
import java.util.*;
class Greet {
    public static void main(String[] args) {
        System.out.println("Hello " + args[0] + " and " + args[1]);
    }
}
/* sample run:
* > java Greet Susan Stephen
* Hello Susan and Stephen
* > Java Greet Tom Jerry
* Hello Tom and Jerry
*/
```

44) What happens when this program is run with one name, for example

> java Greet Elizabeth

(Hint: remember, args is an array of strings, and the print statement is accessing the first and second elements)

- A) The program outputs: Hello Elizabeth and null
- B) The program outputs: Hello Elizabeth and Elizabeth
- C) The program outputs: Hello Elizabeth
- D) The program throws an exception

45) What happens when this program is run with three names, for example

> java Greet Moe Larry Curly

- A) The program throws an exception
- B) The program outputs: Hello Moe and Larry Curly
- C) The program outputs: Hello Moe and Larry and Curly
- D) The program outputs: Hello Moe and Larry

Consider the following two fragments of code:

//Code fragment A

```
{
    x = 1;
    {
        y = 2;
        System.out.println(y);
    };;;; //a bunch of semicolons
    System.out.println(x);
}
```

Code fragment B

```
{ //outer block
    x = 1;
    { //inner block
        y = 2;
        System.out.println(y);
    } //end of inner block
    System.out.println(x);
}
```

46) True or false? The above two code fragments A and B produce exactly the same result.

- A) true
- B) false

In the next two questions consider the following code:

```
Node p = new Node();
Node q = p;
p.x = 1;
q.x = 2;
```

47) How many Node objects are there?

- A) none
- B) one
- C) two

48) What is the value of p.x?

- A) 2
- B) 1

49) The statement that: "Methods and variables start with lowercase and embedded words, as in readInt, dataOut, toString, and loopIndex, are capitalized." is

- A) a convention used by programmers
- B) a requirement of Java syntax

Consider the following three expressions:

```
j *= k = m + 5
j *= (k = (m + 5))
j = (j * (k = (m + 5)))
```

50) The three expressions are equivalent.

- A) true
- B) false

Answer Key

Testname: CMPS012ASPRING16MIDTERMD

- 1) B
- 2) E
- 3) B
- 4) D
- 5) A
- 6) A
- 7) B
- 8) A
- 9) C
- 10) A
- 11) D
- 12) A
